

# Nasolacrimal Duct Mucocele

- Congenital dacryocystocele
- Well-defined, cystic, unilateral or bilateral medial canthal mass in contiguity with enlarged bony NLD in newborn

[Download to Presentation](#)

Axial CECT in an infant demonstrates a cystic mass → with an enhancing rim in the medial right orbit consistent with a mucocele. There is associated enlarged lacrimal sac fossa ↗. Note the normal left lacrimal sac fossa ↘.
